3. MAINTENANCE

3-1. Changing the capstan

The SR-1050's power source frequency has been properly adjusted for the area. If the turntable is brought to the country or area where electrical cycles change from 50 to 60 Hz or vice versa, an adjustment in the turntable speed is necessary as follows.

1. Remove the turntable (platter) and belt.
2. Loosen the setscrew of the capstan and pull the capstan up.
3. Attach a proper capstan (the thicker one is for 50 Hz).
4. Adjust the height of the capstan so that the belt moves smoothly while changing the turntable speed from $33\frac{1}{3}$ to 45 rpm or vice versa, then tighten the setscrew of the capstan securely.

Fig. 3-1

Fig. 3-2

3-2. Replacing the cartridge

1. Turn the locking nut counterclockwise and pull the shell out.
2. Remove the cartridge by loosening the nuts and disconnecting the leads.
3. Attach the cartridge and connect the leads in place correctly.
4. After replacement, adjust the stylus pressure again. (See page 4-5, 4-1. Adjusting the stylus pressure.)

Fig. 3-3

3-3. Oiling

Although the need for oiling depends on usage, oiling should be performed once a year (every 1,000 hours of operation).

1. Motor

Remove the turntable (platter) and apply a few drops of oil.

Use only the oil attached with the turntable. Be careful that the oil does not stain the belt or capstan.

2. Turntable spindle

Remove the bottom board from the cabinet and loosen the setscrew in the bearing section of the turntable spindle, pull the spindle up and apply a few drops of oil.

Fig. 3-4

Fig. 3-5

3-4. Changing the LINE voltage

The SR-1050 can be used at six different voltages: 100 V, 115 V, 130 V, 200 V, 230 V and 250 V. Be careful not to switch to the wrong position.

Fig. 3-6

4. ADJUSTMENT

4-1. Adjusting the stylus pressure

1. Remove the stylus cover from the cartridge and set the control lever to PLAY.
2. Remove the tonearm from its rest.
3. Set the stylus in the notch of the stylus pressure gauge so that the number on the gauge coincides with the stylus pressure as Fig. 4-1. Each notch represents 0.5 gram.
4. Move the main weight back and forth until the stylus pressure gauge balances.

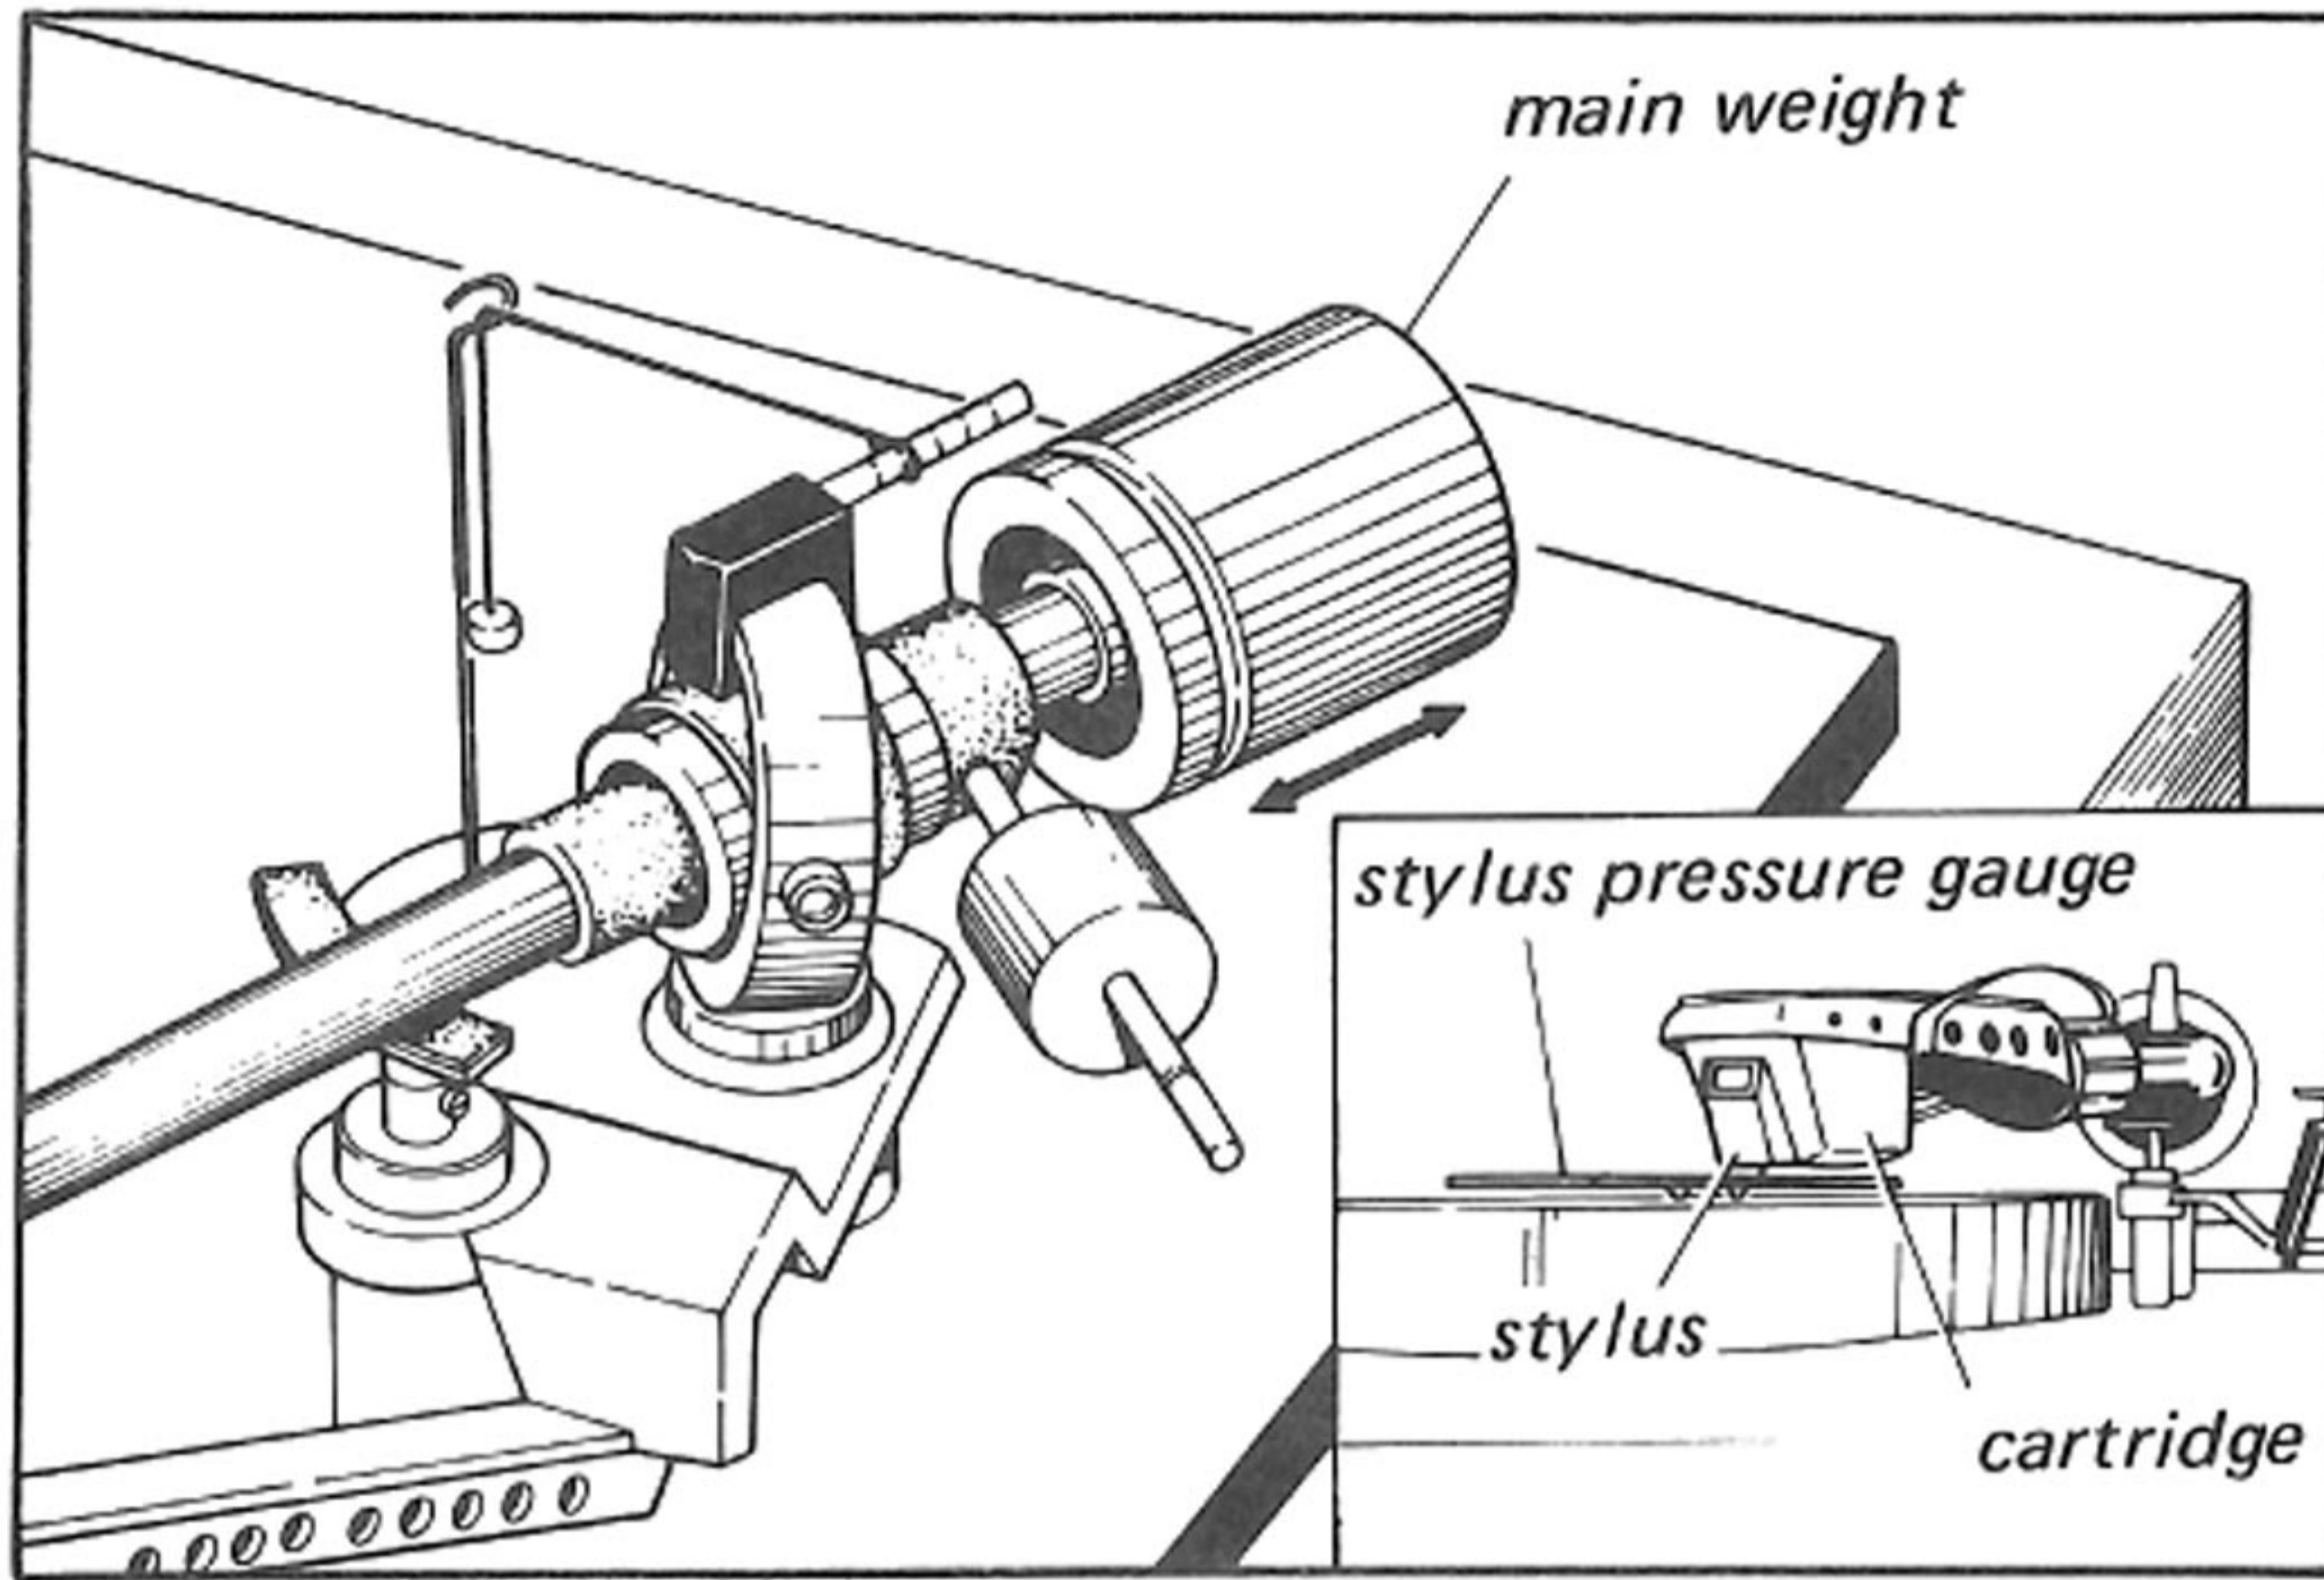

Fig. 4-1

4-2. Adjusting the inside force canceler

1. Thread the loop of the bias weight over the bias cursor and drop the thread into the bias hook.
2. Each notch on the bias lever represents 0.5 gram. Position the loop in the groove corresponding to the stylus pressure being used.

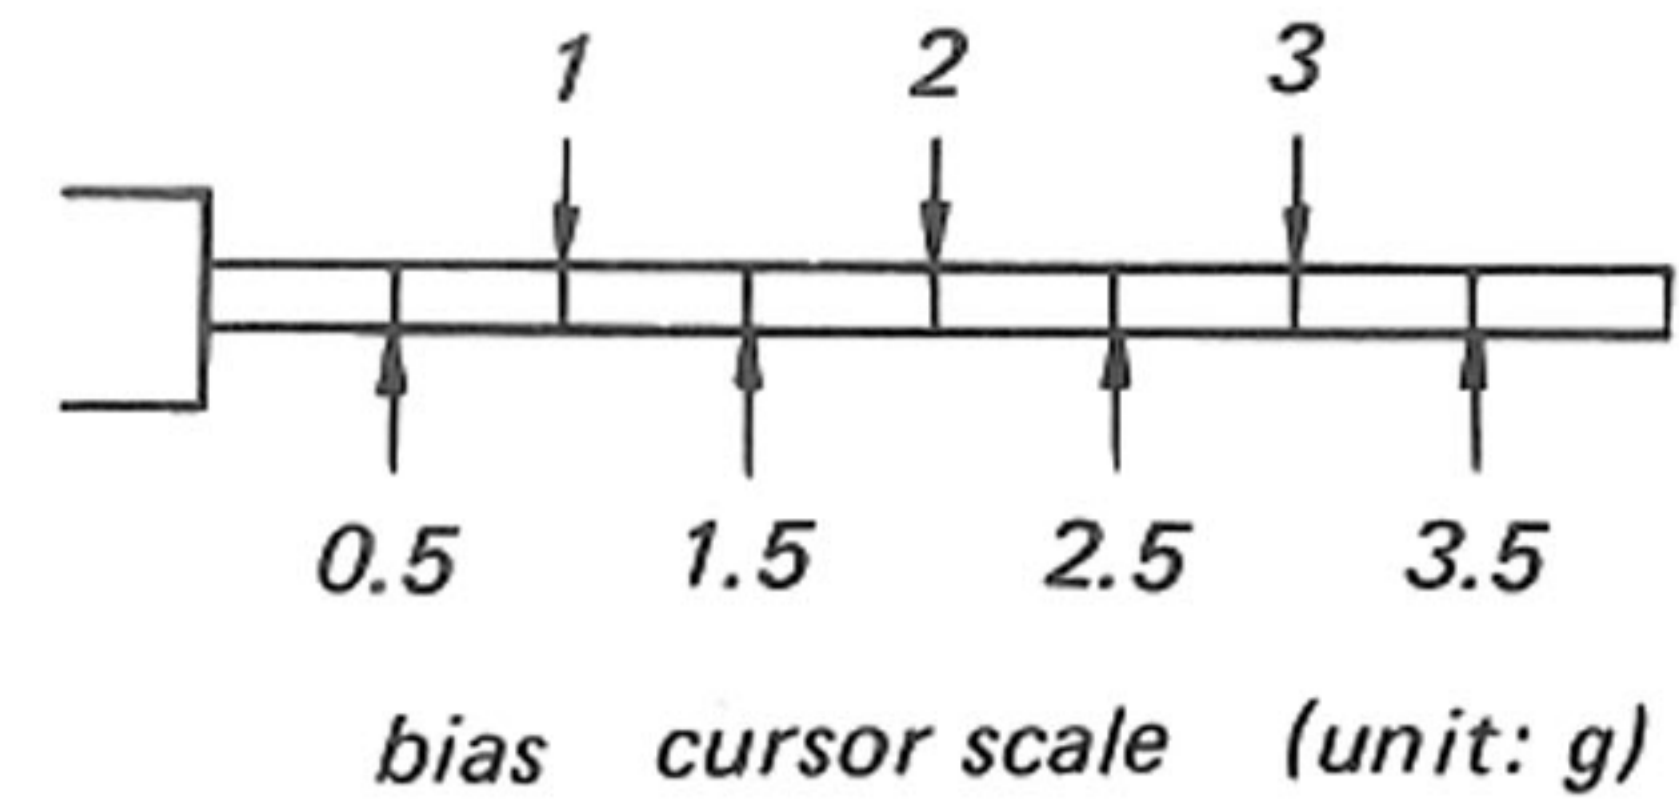

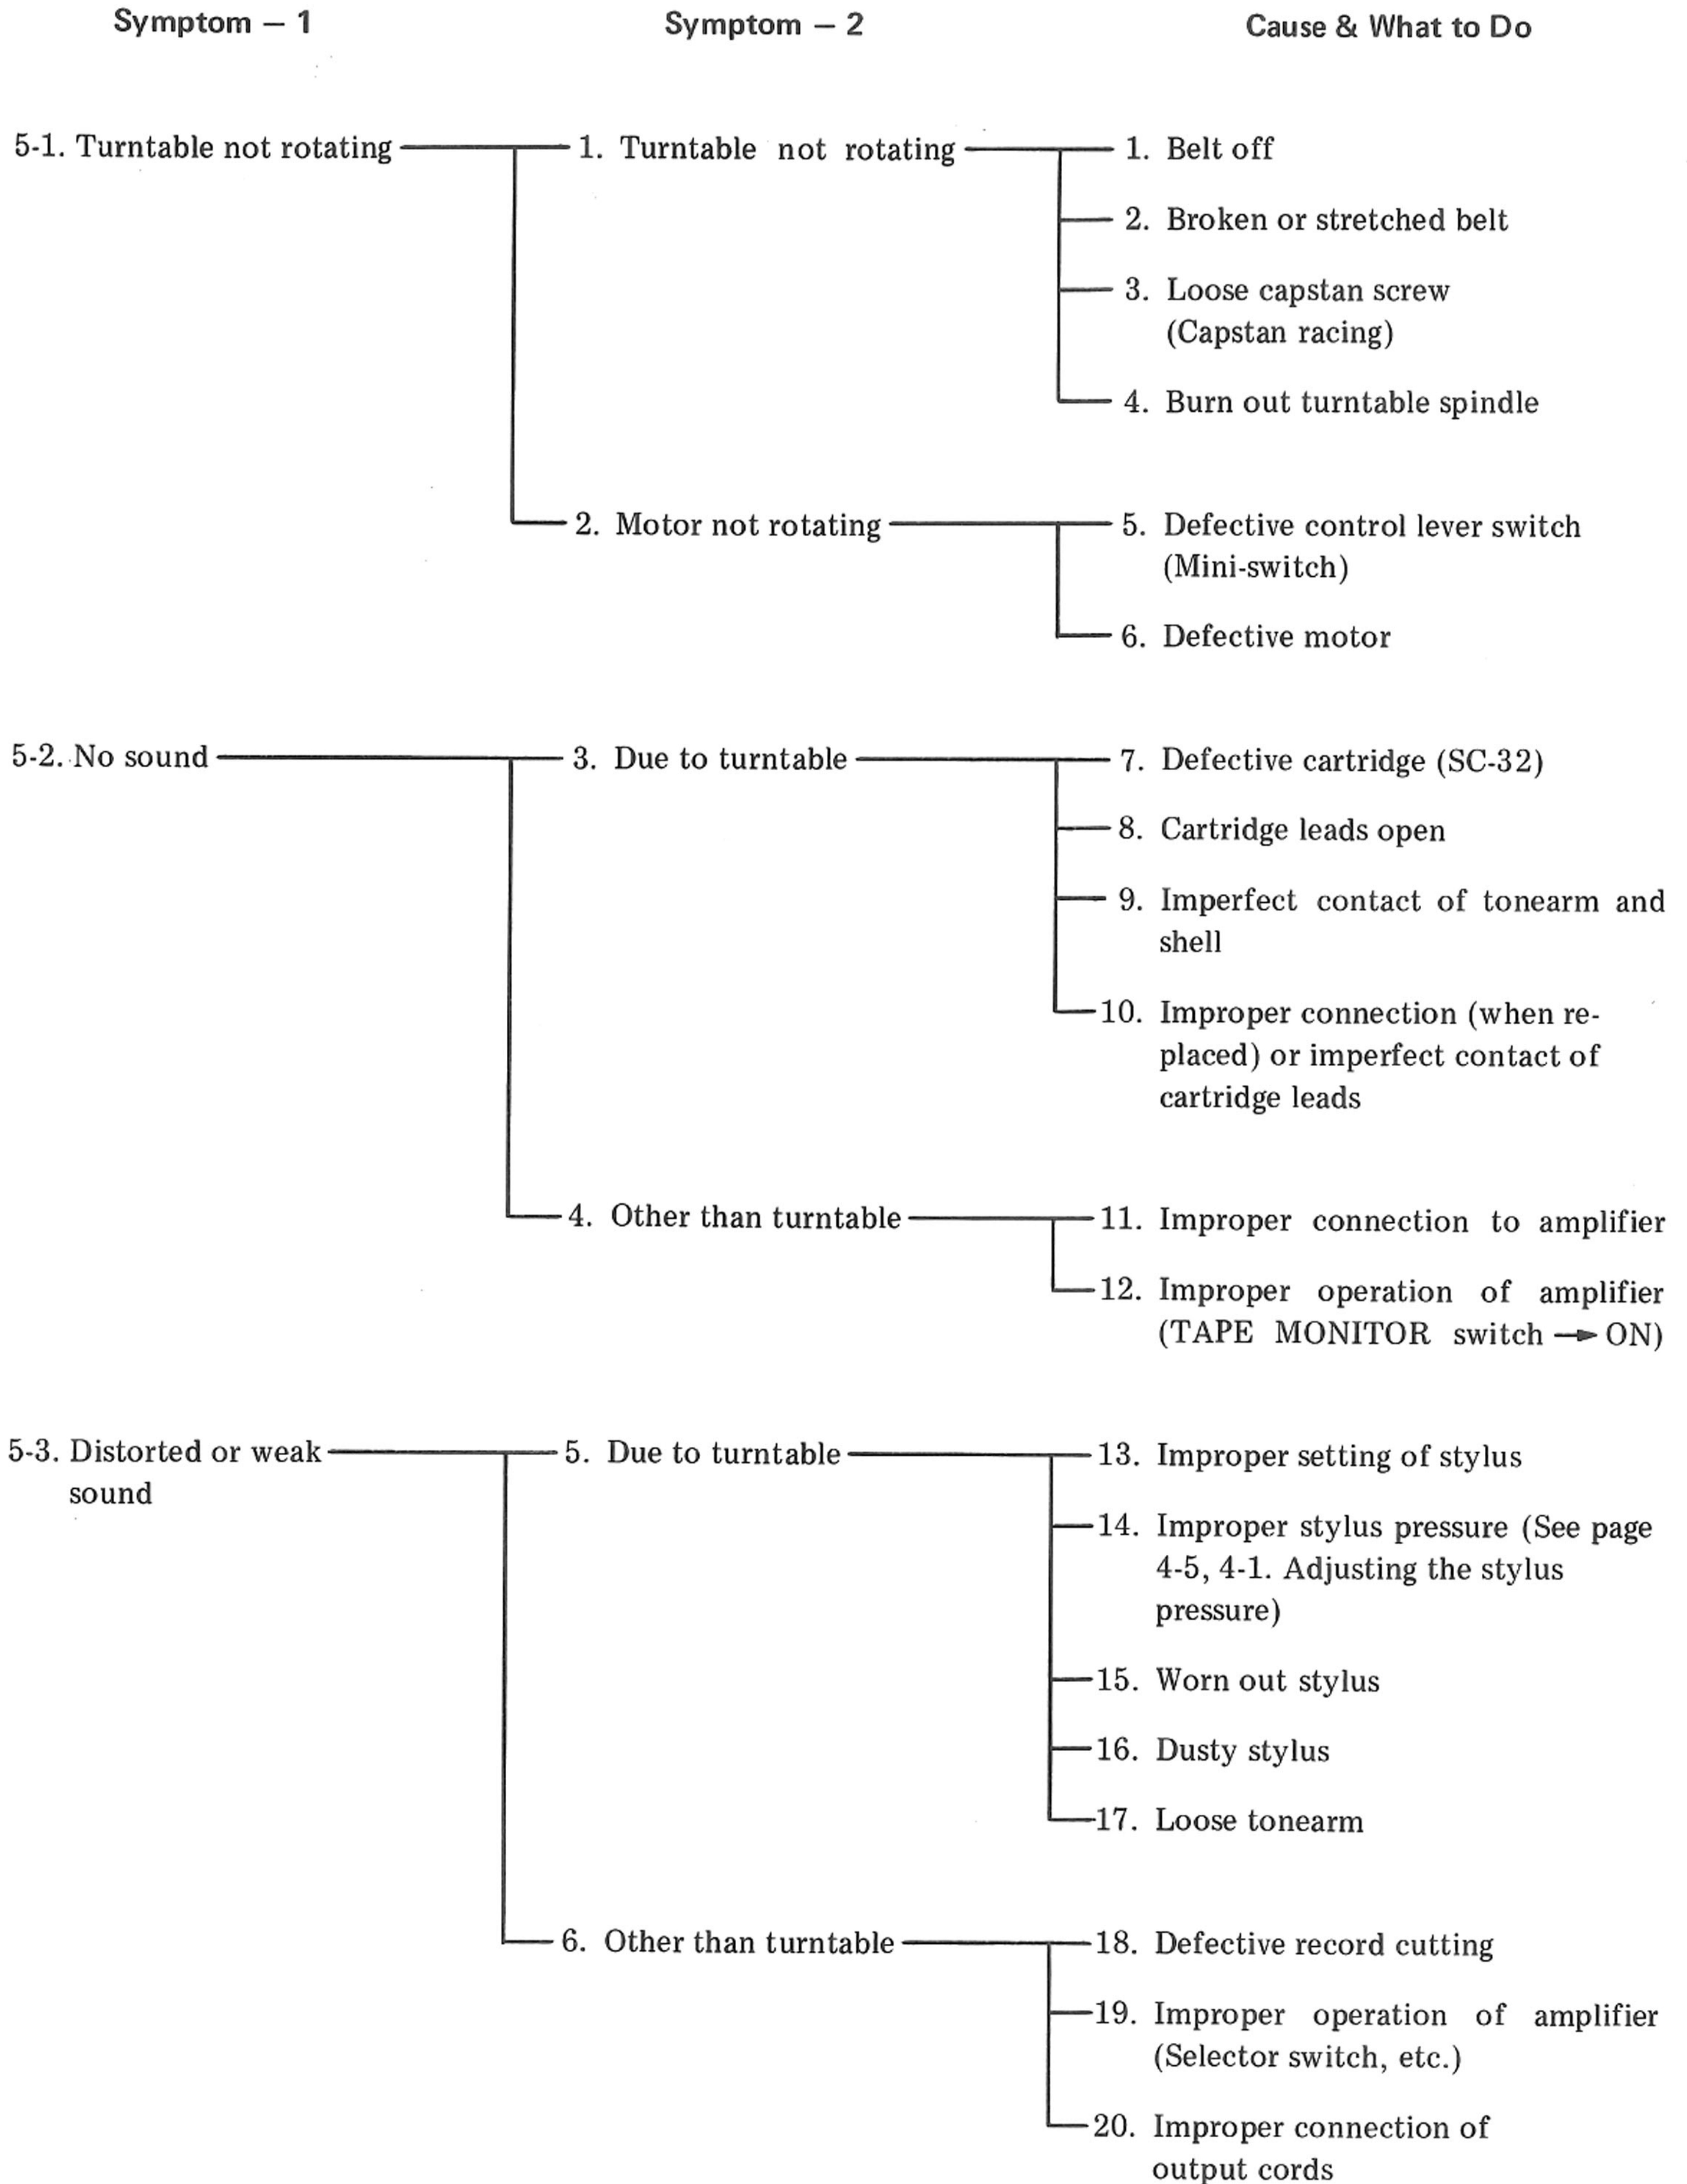

Fig. 4-2

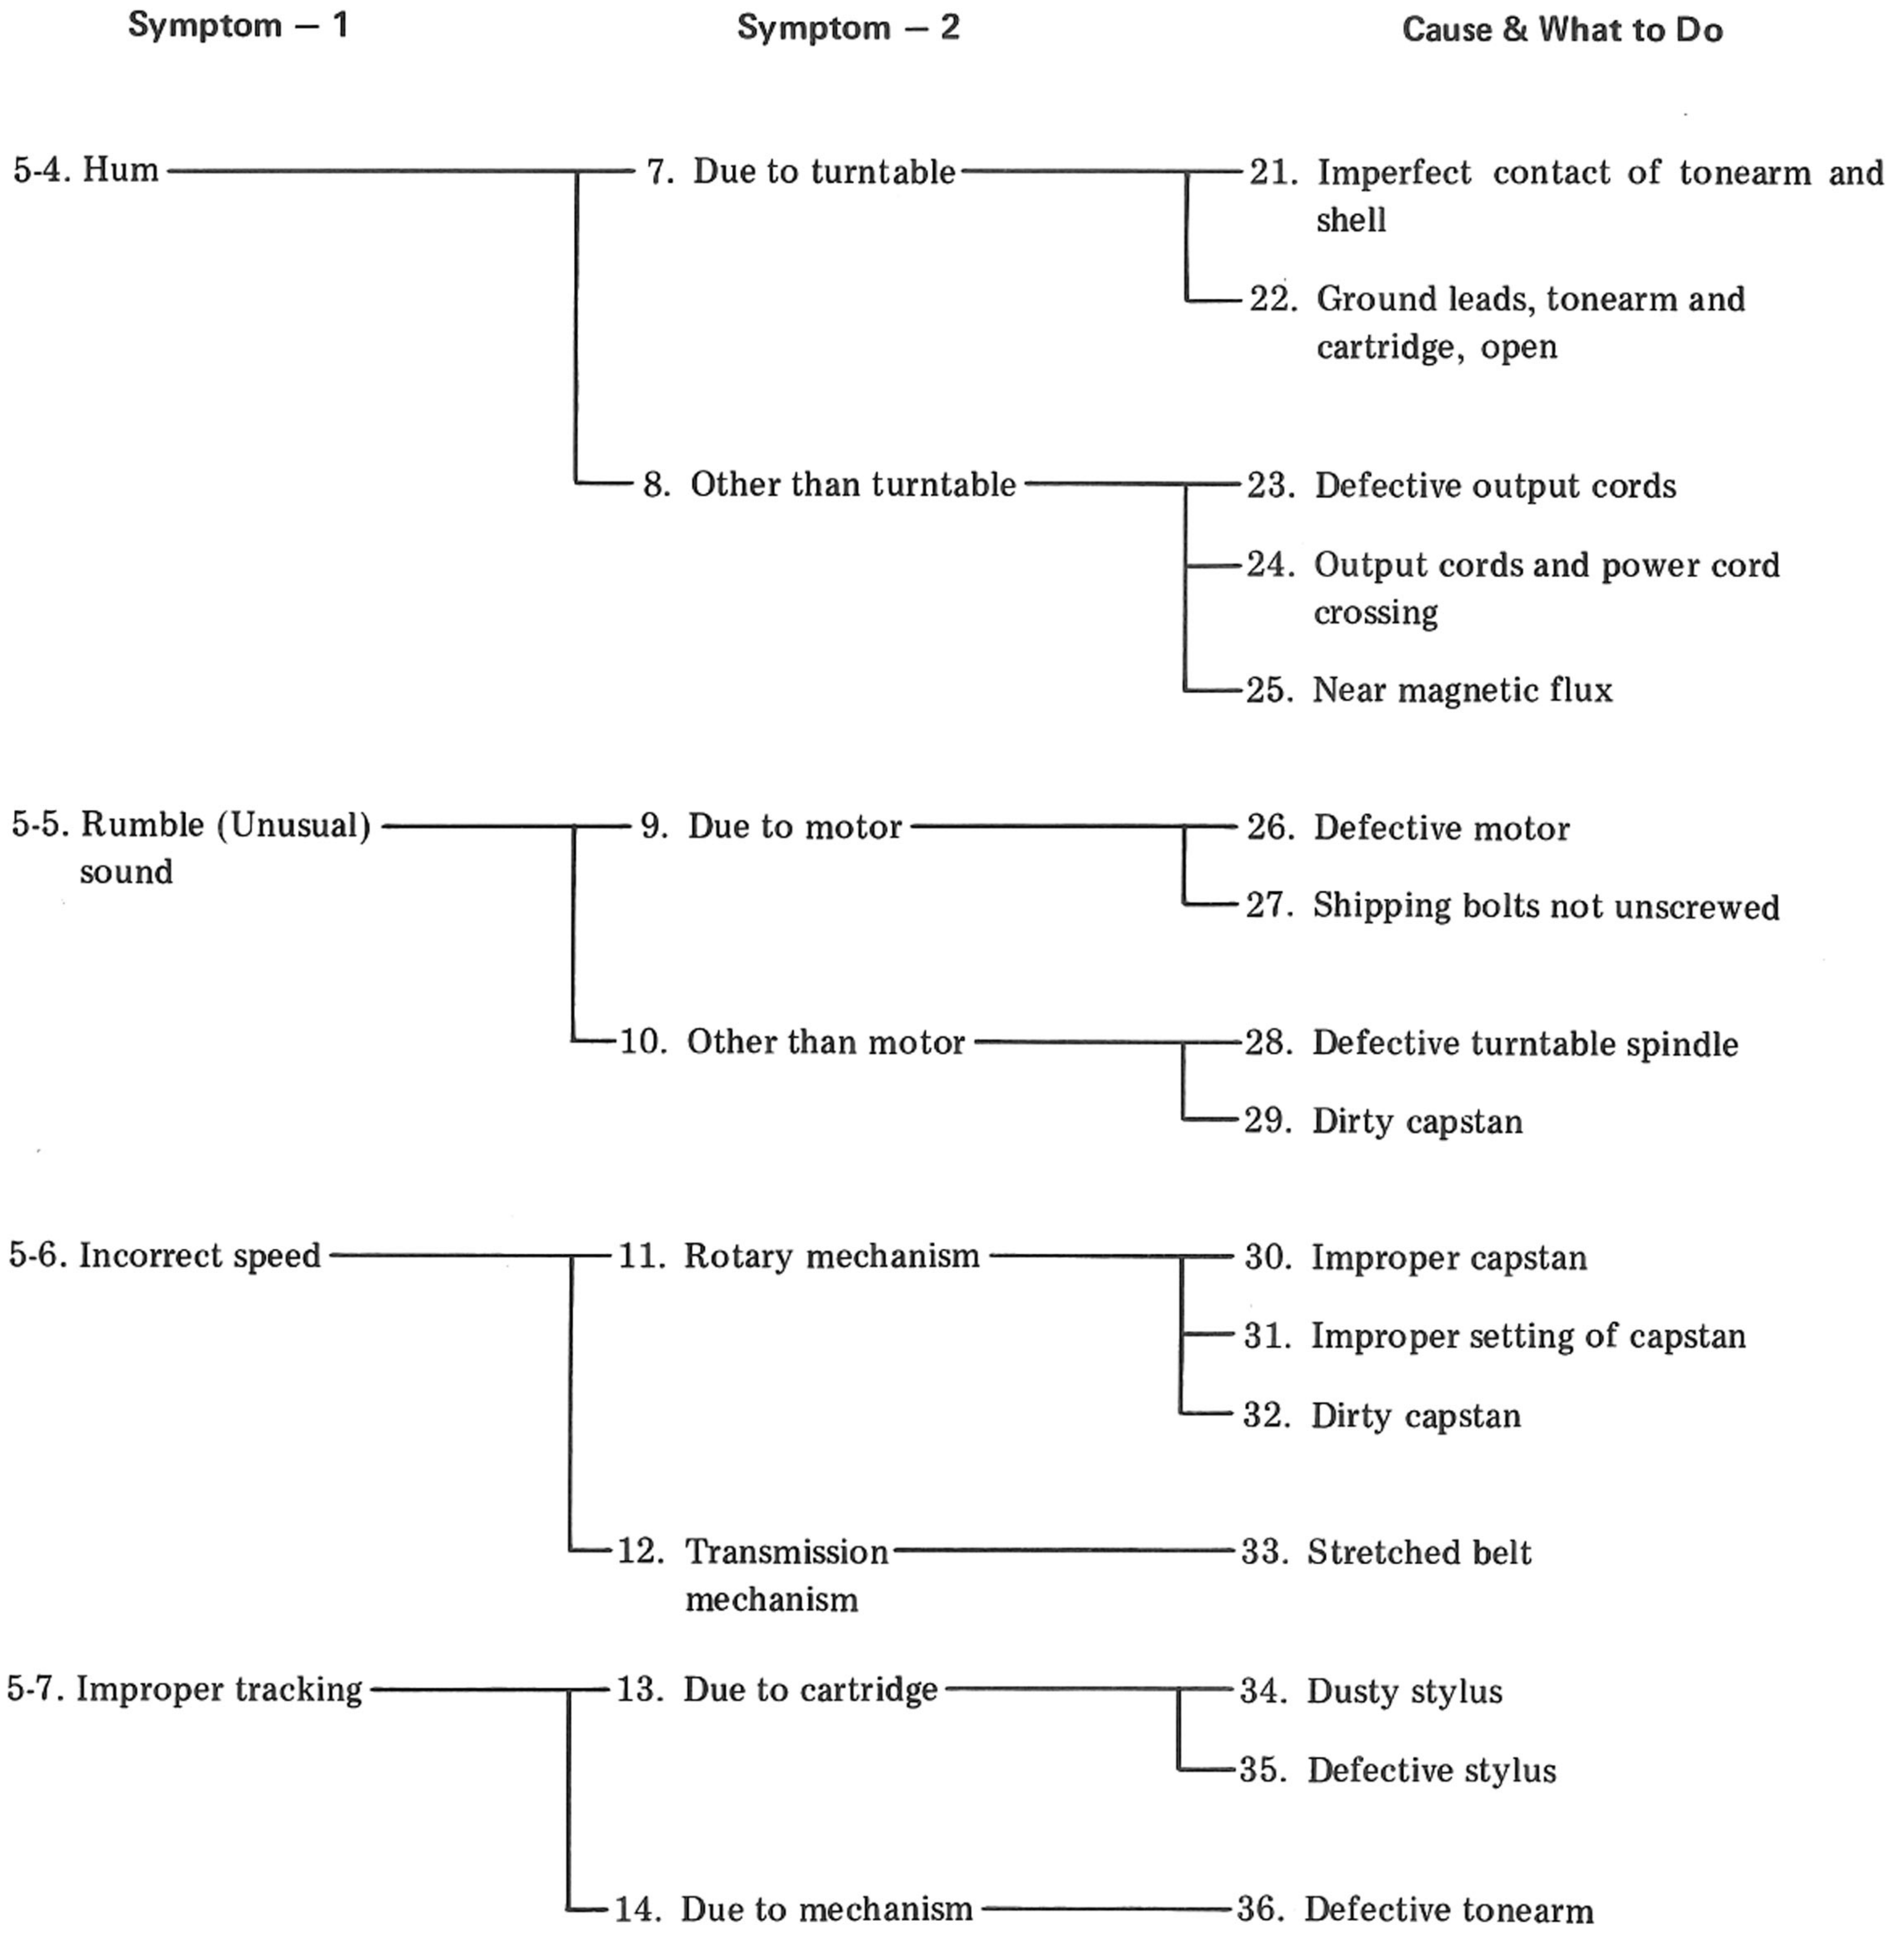

4-3. Adjusting the lateral balancer

1. Cut the AC power off.
2. Balance the tonearm.
3. Move the lateral weight until the tonearm stops at any position as it is placed, while raising the rear bottom edge (hinged side) of the SR-1050 about four inch high.
4. Lateral balance is pre-adjusted for the attached cartridge.
